RE: Addendum #1 - McGrath Judicial Complex – Computer Room Renovation

CEC#20140039

Tek,

Listed below are a couple items to be incorporated into the construction documents for the above mentioned project.

Fire Suppression

1. The new fire suppression control panel shall be wired so it can supervise the power feed to a shunt trip circuit. Provide a form C relay configured as “normally closed”. Supervise the relay using a spare supervisory input on the control panel.

Electrical

1. Per the request of the local fire department to have the lighting in the computer room backed by the generator, the lighting serving the room shall be rewired to the nearest emergency lighting circuit serving the area. The electrical contractor shall verify the voltage of the existing light fixtures and shall verify that the loading of the emergency circuit being extended does not exceed 14A on a 20A branch circuit.

Very truly yours,

David C. Evans
